Snapshot of MTSS Implementation

A multi-tiered system of supports (MTSS) is a proactive and preventative framework that integrates data and instruction to maximize student success from a strengths-based perspective.

Screen

1

Screen all students using validated processes.

- To what extent are we meeting the needs of all students?
- Do at least two sources of data confirm the risk status for identified students?
- Which students will receive additional support?

Respond

2

Adjust core instruction and/or provide interventions.

- How can we adjust core instruction to improve outcomes for students?
- What interventions and supports do students need?
- What resources are needed to deliver instruction and assessments with fidelity?

Monitor

3

Evaluate instruction and interventions with data.

- How are we collecting and analyzing progress monitoring data?
- To what extent are instruction and interventions implemented with fidelity?
- To what extent are teams problem solving for students not making progress?

Improve

4

Reflect on process and adjust for the next screening period.

- To what extent are screening and risk verification processes implemented with fidelity?
- How can we improve the design and implementation for the next screening period?
- What infrastructure is needed for improvements?
