

Iacobucci, Dawn (ed.) (2001), *Journal of Consumer Psychology's Special Issue on Methodological and Statistical Concerns of the Experimental Behavioral Researcher*, 10 (1&2), Mahwah, NJ: Lawrence Erlbaum Associates.

## TABLE OF CONTENTS

### [Front Matter \(Call for Questions, Acknowledgements\)](#)

- I. Analysis of Variance ([click here for all ANOVA topics](#))
  - A. Can I Test for Simple Effects in the Presence of an Insignificant Interaction?
  - B. Can I Make Conclusions Based on an Interaction Without Testing the Simple Effects?
  - C. Identifying the Appropriate MSE Term for an F Test
  - D. Pooling Across Factors
  - E. Unequal Cell Sizes (Missing Data)
  - F. Directional Predictions in Mean Differences
  - G. Should I Treat a Participant Attribute (e.g., Gender) as a Blocking Factor?: Part 1
  - H. Should I Treat a Participant Attribute (e.g., Gender) as a Blocking Factor?: Part 2
  - I. How to Analyze Data from a Nested Design
  - J. How to Analyze Data from a "Yoked" Design
  - K. Dealing with Higher Order Interactions in Repeated Measures Designs
  - L. Multiple Stimuli and Learning Studied Through a Repeated Measures Design
  - M. Should We Plot Means or Mean Differences When Analyzing Within-Subjects Designs?
  - N. Uses of ANCOVA
  - O. When to Use MANOVA and Significant MANOVAs and Insignificant ANOVAs or Vice Versa
  - P. Testing for Significant Differences in Variances, Rather than Means
  - Q. Manipulation Check: Relative Versus Absolute Mean Differences
  - R. Effective Manipulation in the Resource Matching Context
  
- II. Continuous and Discrete Variables ([click here for all "II" topics](#))
  - A. Should I Measure my Variable as Continuous or Categorical?
  - B. Should I Analyze Frequencies or Proportions?
  - C. Analysis of Constant Sum Scores
  - D. Analysis of Frequencies Distributed Across Categories
  - E. Is a Logit Always Better Than the Analysis of Proportions?
  - F. Can I Do an ANOVA on a Binary DV?
  - G. How Do I Interpret Logit Parameters?

H. Treating an Individual Difference Predictor as Continuous or Categorical

III. Measurement ([click here to see all measurement topics](#))

- A. Cronbach's Alpha on Two-Item Scales
- B. Can a Reliability Coefficient Be Too High?
- C. Why Conduct a Factor Analysis and Then Compute an Alpha?
- D. Why Use Alpha If It Is Not a Good Measure of Unidimensionality?
- E. How to Combine Multiple Items Into a Composite Score
- F. Summed Scales and What Is a "Reflective" or "Formative" Indicator
- G. Conveying the Mean and Variance of Variables in a Composite Score
- H. Computing Belief x Evaluations Scores
- I. Writing the Survey Question to Capture the Concept

IV. [Interrater Reliability](#)

- A. Interrater Reliability Assessment in Content Analysis

V. Factor Analysis ([click here to see all the factor analysis Qs & As](#))

- A. Difference Between Principal Components and Factor Analysis
- B. Exploratory Versus Confirmatory Factor Analysis
- C. Orthogonal or Oblique Rotation?
- D. Checking Assumptions of Normality Before Conducting Factor Analyses
- E. How High or Low Must Loadings Be to Keep or Delete a Scale Item?

VI. Structural Equations Modeling ([click here for the SEM topics](#))

- A. Structural Equations Modeling and Statements Regarding Causality
- B. SEM Using Correlation or Covariance Matrices
- C. Improving Model Fit by Correlating Errors
- D. SEM Versus ANOVA
- E. Mediators and Moderators

VII. Other Multivariate Techniques ([click here to see the VII topics](#))

- A. How Can I Create a Continuum on Which to Measure Respondents and Stimuli?
- B. How Do I Choose the Optimal Number of Clusters in Cluster Analysis?
- C. Meta-Analysis
- D. Combining Data on Individuals and Groups, Networks and Dyads

VIII. Other Statistical Issues ([click here for the VIII topics](#))

- A. Sampling
- B. Regression with Correlated Variables (Multicollinearity)

- C. Dealing with Outliers
- D. Why Do We Not Use More Nonparametric Methods?

- IX. Human Participants—Respondents and Researchers ([click here for IX topics](#))
  - A. Recruiting Experimental Participants
  - B. Obtaining Informed Consent
  - C. Why Not Ask Experimental Participants for More Processing Information?
  - D. Ethics of Deleting Controversial Findings
